ALPHV

Corporate overview · October 2026

AI systems integration and consulting

Build AI into the systems that run your business

ALPHV designs, integrates and runs production AI for legal, insurance, healthcare, hospitality, finance and retail teams, from first model to measurable outcomes.

Founded	Headquarters	Office	Clients in
2023	Kuala Lumpur	Singapore	Malaysia, Singapore and Vietnam

Executive summary

ALPHV takes AI past the pilot and into the systems that earn revenue

01	Situation	**Most companies have tried AI. Far fewer run it inside the systems that earn their revenue.** AI pays off after the pilot, not in it.
02	Complication	**Three barriers keep pilots from reaching production.** Data sits in silos, legacy systems resist change and pilots stall at integration.
03	Answer	**ALPHV is an AI-native systems integrator.** The engineers who scope your AI ship and improve it, with models, hosting and guardrails chosen to fit your systems, data and regulator.
04	Evidence	**12 projects delivered and in delivery.** 90+ portal automations for a 36-year-old law firm, 80% less manual data entry time for a Singapore hospitality group, and first of nine at the AI for Insurance Challenge × Tasco.
05	Next step	**Every engagement starts from the business case.** Tech advisory, a data audit and AI strategy research find where AI pays back, before any build starts.

01

AI pays off after the pilot. Not in it.

Most companies have tried AI. Far fewer have it running inside the systems that earn their revenue.

The pilot gap

Pilots stall where AI meets data silos, legacy systems and integration

Start

Pilot

Where most are

Most companies have tried AI.

Barrier 01

Data sits in silos

What closes it

A data audit of what you hold and where it sits, then retrieval over your own data.

Barrier 02

Legacy systems resist change

What closes it

Replace and connect legacy systems, and build AI into ERP, CRM and third-party portals.

Barrier 03

Pilots stall at integration

What closes it

One team from business case to production, with improvement scoped in.

Goal

Production

Where few are

AI running inside the systems that earn revenue.

So what

ALPHV was founded in 2023 to close that gap. We embed AI into the core systems you already run, then stay to improve it after go-live.

Source: alphv.com; alphv.com/about; alphv.com/how-we-work; alphv.com/services (October 2026).

What we believe

Four principles shape how we scope, build and run every system

From a first model to a legacy system replacement, the same four principles apply to every engagement.

Start from the business case

Tech advisory, a data audit and AI strategy research come first, so the build goes where AI pays back.

In practice
Tech advisory, data audit and AI strategy for EasyRenz

One team, no hand-offs

The engineers who scope your AI are the ones who ship and improve it. You keep one point of accountability throughout.

In practice
Six services, delivered by one team

Built around your systems, data and regulator

Models, hosting and guardrails are chosen to fit the systems you already run, the data you hold and the rules you answer to.

In practice
A law firm's models run on a locally hosted NVIDIA GPU workstation

Improvement scoped in from day one

Monitoring adoption and model performance is part of the build. After go-live, we stay to review, iterate and improve.

In practice
After go-live, we stay to review, iterate and improve

People

The people who scope your system are the people who build it

A 100% Malaysian team, led by a founder who still writes code. We hire across five role families, all working on real client systems.

AI engineers

Build retrieval, agents and fine-tuned models, then deploy, monitor and improve them inside client systems.

Software engineers, web and mobile

Build the web and mobile platforms, portals and integrations that production AI runs inside.

Solutions architects

Design architectures that fit a client's stack, choosing models, hosting and guardrails around their data and regulator.

UI/UX designers

Design the interfaces people use every day, from client portals and CRM dashboards to lending platforms.

Consultants

Run tech advisory, data audits and AI strategy research to find where AI pays back before any build starts.

Platforms and partners

We choose the model, compute and cloud per project, for your data, cost and residency

Models

Qwen · Claude · OpenAI · Gemini · ILMU

Compute

FPT AI FACTORY
H100 compute

NVIDIA.
GPU workstations

AI hardware

FootfallCam™
Hardware for Kiralytics

Cloud

Alibaba Cloud · Google Cloud · Microsoft

How we choose

Data and residency
Locally hosted models where data must stay in-house

Cost
H100 compute shortens training time and lowers cost

Capability
Vision and language models together where a job needs both

Governance
Guardrails, AI safety and alignment are part of the design

Partnerships

24 Apr 2026	Strategic partnership with FPT AI Factory
Dec 2025	Highlighted as one of 12 AI implementation partners at Alibaba Cloud AI Day
15 Jul 2025	Joined the Alibaba Cloud Partner Network, Tier 2 reseller for Malaysia

Technology platforms, not clients.

03

Six services, one team

Every service is shipped and improved by the same engineers who scoped it.

Capability framework

Six services cover the path from first model to the last integration

Production AI inside the systems you already run

ALPHV designs, builds and runs AI systems inside your existing operations.

01

AI engineering

- Knowledge integration and RAG
- Specialised fine-tuning
- Multimodal intelligence
- Document AI

02

Agentic automation

- Agentic process automation
- Custom tools, MCP servers and APIs
- WhatsApp sales agents
- Claims and case handling

03

System integration and consulting

- Strategy before the build
- Replace legacy systems
- Connect third-party portals
- Take over projects midway

04

Computer vision and smart city

- People counting and occupancy
- Vehicle classification
- Speed detection and flow analysis
- Smart city video analytics

05

Web and mobile apps

- Product strategy
- UI/UX design
- Web platforms
- Mobile apps

06

Data, RPA and MLOps

- Data science and analytics
- Robotic process automation
- Agentic RPA
- DevOps and MLOps pipelines

Method
Discover · Design · Implement · Improve

Architecture
A brain, an action layer and guardrails

Platforms
Models, compute and cloud per project

Products
Kiralytics and avatars, ready to deploy

Source: alphv.com/services and its six service pages; alphv.com/how-we-work; alphv.com/products (October 2026).

Full stack AI engineering

Every system combines a brain, an action layer and guardrails

Three layers in every ALPHV system

		In practice: a 36-year-old law firm
The guardrails AI governance	■ AI safety and alignment ■ Governance guardrails ■ Locally hosted models where data must stay in-house	→ **A locally hosted NVIDIA GPU workstation** The models run here, so client data stays inside the firm.
The action Agentic and autonomous solutions	■ Agentic process automation ■ Custom tool, MCP and API development for agents ■ Multi-agent systems	→ **Agentic RPA across 90+ portals** Automations across bank, government, SSM and CTOS portals, with workflow, email and WhatsApp.
The brain Foundational intelligence core	■ Custom knowledge integration, RAG and beyond ■ Specialised model fine-tuning ■ Multimodal intelligence across vision and language	→ **Qwen with GenAI-RAG** Retrieval grounds answers in the firm's own documents.
Your core systems	ERP · CRM · case management · bank, government, SSM and CTOS portals · email · WhatsApp	→ **One ALPHV platform, in place of legacy** Case management, back office and accounting

Source: alphv.com/services/ai-engineering; alphv.com/services; alphv.com/insights/sovereign-ai-case-management-law-firm (October 2026).

Services 1–3

AI engineering, agents and integration turn business cases into working systems

AI engineering

Turn your own data into specialised AI

- Knowledge integration and RAG over your documents and records
- Specialised fine-tuning, including Qwen2.5-14B on H100 SXM
- Multimodal models and document AI

Proof

Clinicians at a leading healthcare group review a drafted report instead of writing from scratch

Agentic automation

Put AI agents to work across your systems

- Agentic process automation for documents and claims
- Custom tool, MCP and API development for agents
- WhatsApp sales agents that sync leads to your CRM

Proof

80% less manual data entry time with WhatsApp AI agents for a Singapore hospitality group

System integration and consulting

Replace and connect legacy systems, from strategy to go-live

- Tech advisory, a data audit and AI strategy research
- Legacy systems replaced and third-party portals connected
- Projects taken over midway and delivered

Proof

90+ portal automations for a 36-year-old law firm; iPajak Group's six branches on one system

Source: alphv.com/services and its six service pages (October 2026).

Services 4–6

Vision, platforms and MLOps carry AI to cameras, users and production pipelines

Computer vision and smart city

Count, classify and track with video analytics

- People counting and occupancy with Kiralytics MATA
- Traffic counting and speed detection with Kiralytics TRAFFIK
- Smart city video analytics

Proof

Productised as Kiralytics MATA and TRAFFIK, on live CCTV or with AI hardware from FootfallCam

Web and mobile apps

Web and mobile platforms used by thousands of people

- Product strategy and UI/UX design
- Web platforms and mobile apps, engineered through to delivery
- AI inside the product, from agents to digital avatars

Proof

LocumLah: **3,000** doctors and **600** clinics onboarded; Politikus by Caprice: **32,000** swipes

Data, RPA and MLOps

Keep models accurate in production

- Data science, analytics and dashboards
- RPA, and agentic RPA for document work that needs judgement
- DevOps and MLOps pipelines that retrain, evaluate and redeploy

Proof

RPA for PowerDNA's genetic test report generation, in Malaysia and China

Source: alphv.com/services and its six service pages (October 2026).

How we work

Every engagement moves through four steps, run by one accountable team

01

Discover

Start from the business case

Run tech advisory, a data audit and AI strategy research to find where AI pays back, before any build starts.

- Tech advisory on the systems and processes AI must fit
- A data audit of what you hold and where it sits

02

Design

Design an architecture that fits your stack

Choose models, hosting and guardrails around your existing systems, your data and your regulator.

- Models chosen per project
- Locally hosted models where data must stay in-house

03

Implement

Build AI into production

Integrate retrieval, agents and automation across your core systems, including bank, government and SSM portals.

- Agents with the tools, MCP servers and APIs they need to act safely
- Integration with ERP, CRM and third-party portals

04

Improve

Improve continuously after go-live

Monitor adoption, review model performance and iterate, with improvement scoped into the build from day one.

- Model performance reviews, with MLOps to keep models accurate
- Iterations planned from day one, not bolted on later

So what

Already mid-build? We can take it over, as we did for iPajak Group's six-branch pawn brokerage system.

Source: alphv.com/how-we-work (October 2026).

Regulated sectors

Regulated teams keep data in-house, reach portals and act within guardrails

Data that stays in-house

Where data must stay inside your organisation, we deploy locally hosted models, for example on your own NVIDIA GPU workstation.

- Client data stays inside the firm for a 36-year-old law firm
- Models, hosting and guardrails chosen around your regulator

Integration with the systems you run

Most of our work connects AI to legacy and third-party systems, including bank, government, SSM and CTOS portals.

- **90+** third-party portal automations for one law firm
- Projects taken over midway and delivered, as for iPajak Group

Guardrails and governance

AI safety and alignment and governance guardrails keep each system accountable, from customer conversations to claims.

- Intelligent conversation flows with guardrails
- Duplicate claims from the same person identified automatically
- CRM features by user access level

Where models run, chosen per project

Inside your organisation
Locally hosted models on your own NVIDIA GPU workstation

Partner GPU cloud
H100 SXM through FPT AI Factory, for training and fine-tuning

Public cloud
Alibaba Cloud and Google Cloud, chosen for data, cost and residency

04

Work shaped around your sector

Six sectors with work to show, and five products that package proven solutions.

Industries

Work to show in six sectors, from a 36-year-old law firm to a Vietnamese insurer

Sector	Client	What ALPHV built	Models and systems	Proof
Legal	Abraham Ooi & Partners, 2025	One platform for case management, back office and accounting, replacing legacy	Qwen · GenAI-RAG · Agentic RPA · NVIDIA GPU	90+ third-party portal automations; client data stays inside the firm
Insurance	Tasco Insurance, Vietnam	A multimodal case system that assesses asset damage from images and video	Qwen · Multimodal AI · Agentic AI	**Proof of concept, 2026:** 24/7 damage assessment; no production results yet
Healthcare	Leading healthcare group, 2026	An engine that assesses medicolegal and insurance cases and generates the report	Qwen · Claude · RPA	Clinicians review a draft instead of writing from scratch
Hospitality	Singapore hospitality group, 2026	WhatsApp AI agents that handle conversations 24/7 and sync every lead to the CRM	Qwen · WhatsApp · AI agents	80% less manual data entry time
Financial services	Fundaztic and iPajak Group	Debt recovery management for Fundaztic; pawn brokerage for iPajak Group, taken over midway	System integration · Consulting · UI/UX	6 iPajak branches on one system, across Malaysia
Retail	Eastern Decorator	An AI content factory that automates e-commerce product photoshoots	Gemini · Multimodal AI · Workflow automation	3 content types per product: imagery, copy and listing variants

Source: alphv.com/industries, its six sector pages and alphv.com/insights (October 2026). Six of the 16 industry verticals ALPHV serves.

Products

Five products give engagements a working starting point

The Kiralytics family

Analytics for workforces, shop floors, roads and brands

Workforce optimiser
Kiralytics SHIFT™ Flagship

Rostering, GPS-verified attendance and workforce analytics for multi-location retail.

- GPS-verified clock-in with geofence validation
- Cross-branch KPIs and unified reporting for HQ

People and traffic counting
Kiralytics MATA and TRAFFIK

People counting for retail floors and traffic analytics for road planning.

- Foot traffic, flow and occupancy on live CCTV
- Vehicle classification and speed detection

Sentiment monitoring
Kiralytics EMOSI

Track brand perception across Facebook, X, Instagram, TikTok and news.

- Social: Facebook, X, Instagram and TikTok
- News coverage alongside social channels

ALPHV avatars

For orders, answers and interviews

Digital avatars
ALPHV Avatar™ Flagship

Digital avatars that take orders, answer questions and screen candidates.

- Digital Mamak, Digital Ustaz, Digital Interviewer
- Digital Ustaz is live at digitalustaz.com

Video and voice avatars
ALPHV HelloGen™

Turn a 3-minute clip into a life-like avatar with lip-sync and low-latency replies.

- Lip-synced video and voice
- Low-latency replies

Also from ALPHV

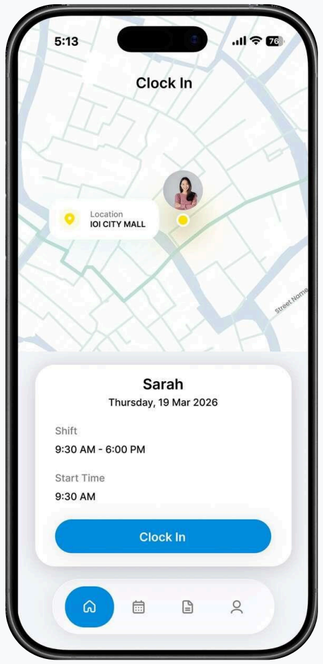

AI-generated UGC and ads for brands, including a client reel with 50.1K views for @richdadwilliam

Kiralytics FIGHT, a real-time combat sports analysis prototype for national athletes, in development

Source: alphv.com/products and its product pages (October 2026). The 50.1K views come from a separate AI content service, not from ALPHV HelloGen™.

Flagship products

Two flagships for day-to-day operations: branch rostering and role-based avatars

Kiralytics · Workforce optimiser

Kiralytics SHIFT™

Cloud-native rostering, GPS-verified attendance and workforce analytics for multi-location retail.

One product, three views

Store managers	Plan the roster and approve changes
Rostered staff	Clock in at the branch
HQ admins	Compare every branch

Core features

- Roster timeline
- GPS-verified clock-in
- Cross-branch KPIs
- Real-time attendance

ALPHV · Digital avatars

ALPHV Avatar™

Digital avatars, each built for one role, from the restaurant counter to the hiring funnel.

Digital Mamak

Takes restaurant orders

Digital Ustaz

Answers questions about Islam 24/7 from the Al-Quran and Hadith; live at digitalustaz.com

Digital Interviewer

Screens candidates at scale

ALPHV HelloGen™ creates a life-like video and voice avatar from a 3-minute clip, with lip-sync and low-latency replies.

Source: alphv.com/products and its product pages (October 2026).

05

Work in the field, and the people noticing

Nine engagements and a case note across Malaysia, Singapore and Vietnam, plus the wins, stages and partnerships around them.

Portfolio

Nine engagements and a case note across eight sectors, from proof of concept to production

Client	Sector · country	What ALPHV built	Result or status
Abraham Ooi & Partners	Legal	Sovereign AI case management, replacing a legacy system	**90+** portal automations; in use since 2025
Tasco Insurance	Insurance · Vietnam	Multimodal case system for asset damage claims	**Proof of concept, 2026;** no production results yet
Leading healthcare group	Healthcare · Malaysia	Medicolegal claims processing, intake to adjudication	**4** claim stages in one flow
Leading hospitality group	Hospitality · Singapore	AI CRM with WhatsApp sales agents	**80%** less manual data entry time
Fundaztic	Financial services	Debt recovery management and a UI/UX overhaul design	Debt recovery system now running
iPajak Group	Financial services · Malaysia	Centralised pawn brokerage system, taken over midway	**6** branches on one system; delivered
Eastern Decorator	Retail	AI content factory for e-commerce product content	**3** content types per product
FPT AI Factory case note	Retail	Promotions model: Qwen2.5-14B-Instruct on H100 SXM	Promotions model built
A telco	Telecoms	VR and web experience for a travelling roadshow	VR headset and browser from one shared scene
Carlsberg	Brewing and consumer goods	Assisted a core operational data migration	**5-month** engagement, extraction to cutover

Source: alphv.com/insights and its case pages (October 2026). Country shown where the case page states it.

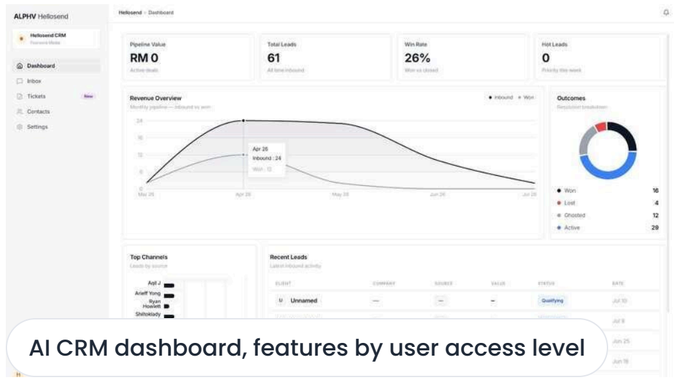

Hospitality

WhatsApp AI agents cut manual data entry time by 80% for a Singapore hospitality group

Agentic automation · Singapore · 2026 · Qwen · WhatsApp

Situation

A leading hospitality group in Singapore talks to its customers on WhatsApp. Leads from those conversations were entered into the CRM by hand.

AI CRM dashboard, features by user access level

Approach

An AI CRM with WhatsApp sales agents.

- Agents handle customer conversations 24/7, in natural language
- Every lead syncs to the CRM, and hot leads reach sales in real time
- Intelligent conversation flows with guardrails
- A CRM dashboard by user access level, with one-click contracts, invoices and reports

How it runs. The agents run on Qwen inside WhatsApp, where the conversations already happen.

Impact

80%

Less manual data entry time

24/7

Customer conversations handled by AI agents

In use, 2026. Every lead reaches the CRM, and the sales team is alerted to hot leads in real time.

Source: alphv.com/insights/whatsapp-ai-crm-singapore-hospitality (October 2026). Note: the client is not named on alphv.com; 80% is the reduction in manual data entry time reported on the case page.

Legal

A 36-year-old law firm now runs on sovereign AI, with 90+ portal automations

AI engineering | System integration | 2025 | Qwen | GenAI-RAG | Agentic RPA | NVIDIA GPU

Situation

Case management, back office and accounting ran on a legacy system, and staff worked across bank, government, SSM and CTOS portals. The firm needed AI for document work, without client data leaving the firm.

Abraham Ooi & Partners
ALPHV Lawtech Solutions, delivered 2025

The models run on a locally hosted NVIDIA GPU workstation, so client data stays inside the firm.

Approach

One platform replaced the legacy system.

- Matters, tasks, teams and a client portal for lawyers, clerks and secretaries
- Bank loan document AI extraction and template-based document generation
- 90+ third-party portal automations, including banks, government, SSM and CTOS
- Workflow, email and WhatsApp automation, with accounting and e-invoicing

How it runs. Retrieval grounds answers in the firm's own documents, and agentic RPA carries the work into third-party portals.

Impact

90+

Third-party portal automations, including banks, government, SSM and CTOS

2025

In use since delivery

In use. The firm runs case management, back office and accounting on one ALPHV platform, with its data kept in-house.

Source: alphv.com/insights/sovereign-ai-case-management-law-firm; alphv.com, home page; alphv.com/services/system-integration-and-consulting (October 2026).

Financial services

ALPHV took over iPajak Group's project midway and put six branches on one system

Pawn broking | System integration and consulting | Malaysia | Taken over midway

Situation

iPajak Group is a multi-branch pawn broker in Malaysia that has disbursed MYR 500 million. Its project to run six branches on one centralised pawn brokerage system was already under way when ALPHV took it over.

iPajak Group

Multi-branch pawn broker, Malaysia

Delivered after a mid-project handover.

Approach

A centralised pawn brokerage system for iPajak Group's branches across Malaysia.

- Took over a project already in progress
- Scoped the remaining work with the client
- Built and integrated the centralised system
- Delivered one system for all six branches

How it runs. One centralised pawn brokerage system now serves all six of iPajak Group's branches.

Impact

6

Branches across Malaysia on one pawn brokerage system: delivered and running

"Daren and the ALPHV team have been exceptional to work with and have done a commendable job taking over the project midway, especially in providing their technical expertise to meet our specific needs."

Chong Voon Ying

CEO, iPajak Group

Source: alphv.com/insights/pawn-brokerage-system-ipajak; alphv.com/services/system-integration-and-consulting; alphv.com/how-we-work (October 2026). Note: MYR 500 million is the client's own scale, not an ALPHV result.

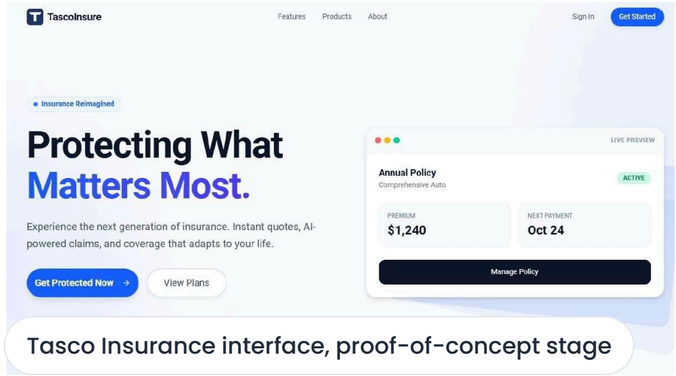

Insurance

A proof of concept assesses insurance damage claims from images and video, 24/7

Agentic automation | Vietnam | Proof of concept, 2026 | Qwen | Multimodal AI

Situation

Damage claims arrive as images, video and PDFs, at any hour. With Tasco Insurance in Vietnam, ALPHV built a proof of concept that assesses them around the clock, from the first photo to the claim report.

Tasco Insurance interface, proof-of-concept stage

Approach

A multimodal case system that prepares the liability assessment and claim report.

- Images, video and PDFs in one case file
- Duplicate claims from the same person identified automatically
- Liability assessment based on Vietnam's Road Act and compendium
- Third-party garage, workflow, email and WhatsApp automation

How it runs. Qwen models read images, video and documents together, and AI agents move each case to the claim report.

Impact

24/7

Damage assessment from images and video

No production results to report yet

The proof of concept already flags duplicate claims and prepares the liability assessment and claim report.

Related. ALPHV won the AI for Insurance Challenge × Tasco, first of nine companies, on 22 Oct 2026.

Source: alphv.com/insights/agentic-ai-insurance-claims-tasco; alphv.com/insights (October 2026). Note: proof of concept; no production results yet.

More work

The same team ships claims engines, content pipelines and a data migration

Healthcare · A leading healthcare group, Malaysia

Medicolegal claims processing

Qwen and Claude draft each medicolegal report for a clinician to review.

4 claim stages in one flow, intake to adjudication

Retail · Eastern Decorator

AI content factory

Gemini turns source assets into imagery, copy and listing variants, with review.

3 content types per product

Brewing and consumer goods · Carlsberg

Core data migration

ALPHV assisted Carlsberg in migrating core operational data to a target estate.

5 months from extraction to cutover

Financial services · Fundaztic

Debt recovery management

Scoped, built and integrated into the lending operation, plus a UI/UX overhaul design.

DRM system that Fundaztic now runs

Telecommunications · A telco

VR and web roadshow

A VR experience and a browser build for a travelling roadshow, with on-site support.

2 clients, VR and web, from one shared scene

Retail · Case note with FPT AI Factory

Promotions model

Qwen2.5-14B-Instruct, fine-tuned with LoRA and Flash Attention.

H100 SXM compute via FPT AI Factory

Source: alphv.com/insights case pages for the healthcare group, Eastern Decorator, Carlsberg, Fundaztic and the telco, and the FPT AI Factory case note (October 2026).

In numbers

Platforms built for thousands of people, and work taken off their teams

Platforms ALPHV designed and engineered

3,000

Doctors onboarded to LocumLah, a Malaysian locum platform

600

Clinics onboarded to LocumLah

32,000

Swipes on Politikus by Caprice, Malaysia's first public predictions game

Work taken off teams

90+

Third-party portal automations for one law firm

80%

Less manual data entry time for a Singapore hospitality group

Source: alphv.com/services/web-and-mobile-apps; alphv.com/insights/sovereign-ai-case-management-law-firm; alphv.com/insights/whatsapp-ai-crm-singapore-hospitality (October 2026). Note: 80% is the result reported for one client.

06

One team, from business case to production

How our model differs, and how a first message turns into a plan.

Why ALPHV

Seven questions to ask any AI partner, and how ALPHV answers them

	Question to ask	ALPHV's answer	Evidence
01	**Who builds what you scoped?**	The engineers who scope it ship and improve it	A founder-led team of 15+, 100% Malaysian
02	**Where does the work start?**	With the business case, before any build starts	Tech advisory, data audit and AI strategy for EasyRenz
03	**Where will our data run?**	Locally hosted, where data must stay in-house	Client data stays inside a 36-year-old law firm
04	**Which models?**	Per project: Qwen, Claude, OpenAI, Gemini or ILMU	Qwen (legal), Qwen and Claude (medicolegal claims), Gemini (retail)
05	**Can it reach our local systems and portals?**	Yes, from ERP and CRM to SSM and CTOS portals	90+ third-party portal automations for one law firm
06	**What happens after go-live?**	We stay to review, iterate and improve	An Improve step on every service, scoped in from day one
07	**Can you take over a project in flight?**	Yes. We scope the remaining work, then deliver it	iPajak Group's six-branch system, taken over midway

Where a global firm may fit better: multi-country transformation programmes that need large teams in many markets at once.

How to engage

Engagements start from the business case, wherever your systems are today

What happens after you get in touch

01

Tell us about the business case

Share what you want AI to change and the systems involved, by form, WhatsApp, phone or email.

02

Find where AI pays back

Tech advisory, a data audit and AI strategy research show where AI pays back, before any build starts.

03

One team designs, builds and improves it

The engineers who scope your AI are the ones who ship and improve it. No hand-offs.

Where we start depends on where you are

Strategy before the build

Tech advisory, a data audit and AI strategy research to find where AI pays back, before any build starts.

Proof · EasyRenz

Replace legacy systems

A 36-year-old law firm replaced its legacy system with one ALPHV platform, back office included.

Proof · Abraham Ooi & Partners, 2025

Connect third-party portals

For the same law firm: 90+ portal automations, including banks, government, SSM and CTOS.

Proof · 90+ portal automations

Take over projects midway

We took over iPajak Group's pawn brokerage system midway and delivered it for six branches.

Proof · iPajak Group
